NETRUST

Data Breach:
It's Easy as 1-2-3

Join us for a LIVE ATTACK simulation!

Eron del Rosario
Manager
Managed Services &
Cyber Security Consulting

The use of traditional username and password no longer provides sufficient protection. The absence of strong authentication makes it easy for adversaries to steal and gain control of credentials. Without strong security policies in place, even the average attacker without the need for sophisticated tools can steal credentials and exfiltrate data.

In this exclusive webinar, we will:

- Demonstrate how easy it is for attackers to steal credentials through the use of MITRE ATT&CK Techniques

- Share best practices to secure user access

- Zero in on the importance of using high assurance authentication

This virtual event is *by invitation only*.
